Full-Stack Developer (Backend Focus)

Eight months of building production-ready systems at an Oslo-based startup. Built a multi-storefront e-commerce platform and an AI phone system with real payment and fulfillment flows. Golden Egg Award for best student work in backend development.

Experience

Full-Stack Developer (Backend Specialist)

02.2026 – Present

Innoscribe | Oslo

Project 1: Jobobike (E-Commerce Platform and Management Dashboard)

- Designed and built a complete multi-storefront e-commerce system from scratch: customer-facing storefront, unified management dashboard, warehouse operations, inventory, logistics, and returns management
- Implemented role-based access control for storefront and warehouse operations across multiple entities
- Integrated Stripe payments with automated payouts triggered by a specific order status change, which also starts warehouse fulfillment
- Built caching and rate limiting for platform performance and API protection
- Stack: Node.js, Next.js, PostgreSQL, Redis, Tailwind CSS

Project 2: Innoscribe's AI-Powered Phone Assistant

- Building a production system for inbound phone call handling with real-time speech processing and business logic
- Implemented integrations: BankID, Vipps, Fiken, Tripletex, Buypass, Signicat, Resos
- Stack: Node.js, Next.js, PostgreSQL, WebSockets

Additional Contributions

- Serve as bridge between technical and non-technical teams; partner with the CEO on strategic decisions spanning technology, product and business priorities

Education

Noroff | Backend Development

08.2024 – 06.2026

Golden Egg Award 2026 - Best Student Work

Technical Skills

Core Stack: Node.js | TypeScript | PostgreSQL | Redis
